FOR IMMEDIATE RELEASE

## **Clearview Intelligence wins two new contracts with Transport for London**

Clearview Intelligence has been awarded two new contract wins by Transport for London (TfL) to work on the supply and maintenance of Automatic Traffic and Cycle Counting equipment across the TfL road network.

TfL is responsible for managing traffic control infrastructure on behalf of all 32 London Boroughs as well as Highways England, Royal Parks and The Corporation of London.

Within TfL, the Outcomes, Insight and Analysis team deliver engineering solutions through pioneering modelling techniques, providing constant improvements to London's road network.

In order to facilitate this work, the team require real time information on the volume, flow and type of traffic on the roads across London. Reliable and accurate monitoring equipment supplying this data is central to this need. With over 40 years' experience in data collection and delivery, Clearview Intelligence know better than most how to make this a reality and how to proactively manage the device network to maximise uninterrupted data delivery. These contracts have been awarded on an initial two year basis with the option for TfL to extend for up to an additional 24 months.

The contract not only covers regular scheduled maintenance of existing equipment but also the supply of any new or replacement equipment when required across the 304 automatic counter sites (ATC) and the 170 automatic cycle counter (ACC) locations.

Commenting on the contract wins, Nick Lanigan, Managing Director of Clearview Intelligence said "winning these kind of prestigious and important contracts shows the full range of capabilities that Clearview Intelligence has to offer to leading edge city operations and planning teams. The unparalleled support delivered through our Operations team gives our clients the confidence that their traffic monitoring will always be accurate and up-to-date."
