

Environmental Policy Statement

Clearview Intelligence Group recognises that care for the environment is a primary responsibility and will take into account the impact our activities, at our premises and during site operations, may have on the environment when business decisions are made.

We will aim for continual improvement through the development of environmental performance evaluation procedures and associated indicators. This will be supported by the provision of regular training in awareness and environmental management for all employees.

The company support the guidance for environmental management given within the standard ISO 14001:2004. To this end the company has developed management systems that are externally certificated by BSI in line with its requirements and are always available to Company personnel for reference. We will comply with or exceed applicable legal requirements which relate to our environmental impacts.

We will communicate this policy to our employees through our intranet and make it available for our customers or other interested parties on our website or on request.

Our strategic aim during 2017 is to continue the development of our management systems to achieve external certification in line with ISO 14001:2015

The Company will develop and maintain a Waste Management Plan to identify how we can minimise waste generation from our activities and, wherever practicable and viable, salvage materials for re-cycling or re-use. All practicable precautions will be taken to prevent, avoid or minimise pollution of air, land or water by noise, fumes, dust or disposal of waste.

Clearview Intelligence Group will work closely with our suppliers to encourage them to adopt a similar commitment to environmental management. Through the use of technology to meet client requirements we will seek the development of new technologies that are environmentally friendly in production, usage and end of life disposal.

Signed:

Nick Lanigan
Managing Director
